SUMMARY

Software Engineer with 3+ years of experience building full-stack web applications, optimizing cloud infrastructure with AWS, and developing AI-powered applications and agent-based workflows. Proficient in Python, TypeScript, JavaScript, C#, React, and SQL, with strong expertise in algorithms, data structures, problem-solving, and building scalable, production-ready systems.

WORK EXPERIENCE

Software Engineer, Mindex | New York ***Oct 2023 - Present***

- Developed a Dashboard Web App using Python, React, TypeScript, SQL, and AWS, delivering insights to stakeholders and reducing analysis time by 50+ hours quarterly
- Developed AI agents for engineering preplanning and implementation, creating Azure DevOps plans and applying code changes; added tracing and evals, cutting manual effort by 60%
- Spearheaded the end-to-end implementation of production logging for a C# application in AWS CloudWatch and Datadog, resolving an issue that previously caused 10% of error messages to be lost
- Led a team of 3 developers and collaborated with clients to deliver end-to-end enhancements across 3 event-driven microservices using C#, Angular, AWS Lambda, and CloudFormation
- Built AI agent workflows using GitHub Copilot and MCP, including multi-agent code review and automating task creation, reducing manual effort by 40%
- Translated ambiguous customer requirements into Python and SQL automation, reducing manual effort by 50%
- Replaced Entity Framework LINQ with SQL stored procedures and parallelized 3 database calls in C#, to reduce the API endpoint response time by 80%
- Optimized JavaScript translation logic by batching API requests, improving performance by 80%

Software Engineer Intern, Mindex | New York ***Jan 2022 – Aug 2022***

- Engineered a billing system with Python, React, and TypeScript, boosting payment processing efficiency by 30%
- Collaborated with 11 developers using Agile principles, conducting code reviews that uncovered and rectified a major bug preventing updates to 1M+ database records
- Enhanced login security by integrating AWS Cognito with C# and SQL, reducing invalid access attempts by 50%
- Designed a serverless integration architecture using AWS CloudFormation, Lambda, DynamoDB, SNS, and SQS to decouple services, reducing critical failures by 20%

Awards and Certifications

- 3rd Place – AI-Native Talent Hunt Hackathon, SF Tech Week | October 2026
- AWS Certified Developer – Associate

PROJECTS

AI Incident Investigator | *Python, TypeScript, React, FastAPI, Hermes Agent, MCP, Docker* | Link ***(Ongoing)***

- Building an AI agent with Python, React, FastAPI, Hermes, MCP, and OpenTelemetry for root-cause analysis
- Developing agent skills, regression evals, and human-approved remediation for reliable incident resolution

Multi-Agent AI Research System | *Python, LangChain, OpenAI API* | Link

- Developed a LangChain-based multi-agent system to automate web research, and quality review
- Architected a critic-guided revision loop that improved report quality by 25%

Discord Clone – Full Stack | *Next.js, React, TypeScript,* Tailwind CSS, *Prisma, PostgreSQL and Socket.io* | Link

- Designed an end-to-end real-time chat, voice, and video app with Next.js, Socket.io, Prisma, and PostgreSQL
- Automated AWS ECS deployments with Docker, ECR, and Jenkins CI/CD, accelerating rollouts by 25%

AI-Powered Personal Tutor – Full Stack | *Node.js, Express, React, Tailwind CSS, OpenAI API and MongoDB* | Link

- Automated quiz generation from text summaries using the GPT-4 API, enhancing user retention by 30%

EDUCATION

Master of Science in Computer Science ***GPA: 3.79/4.0***

Rochester Institute of Technology ***Aug 2020 – Aug 2023***

Relevant Coursework: Object-Oriented Programming, Data Structures & Algorithms, Web Development, Cloud Computing

TECHNICAL SKILLS

Python, TypeScript, JavaScript, C#, SQL, React.js, Next.js, Angular, Node.js, AWS, Docker, Git
